## Wagon Wheels

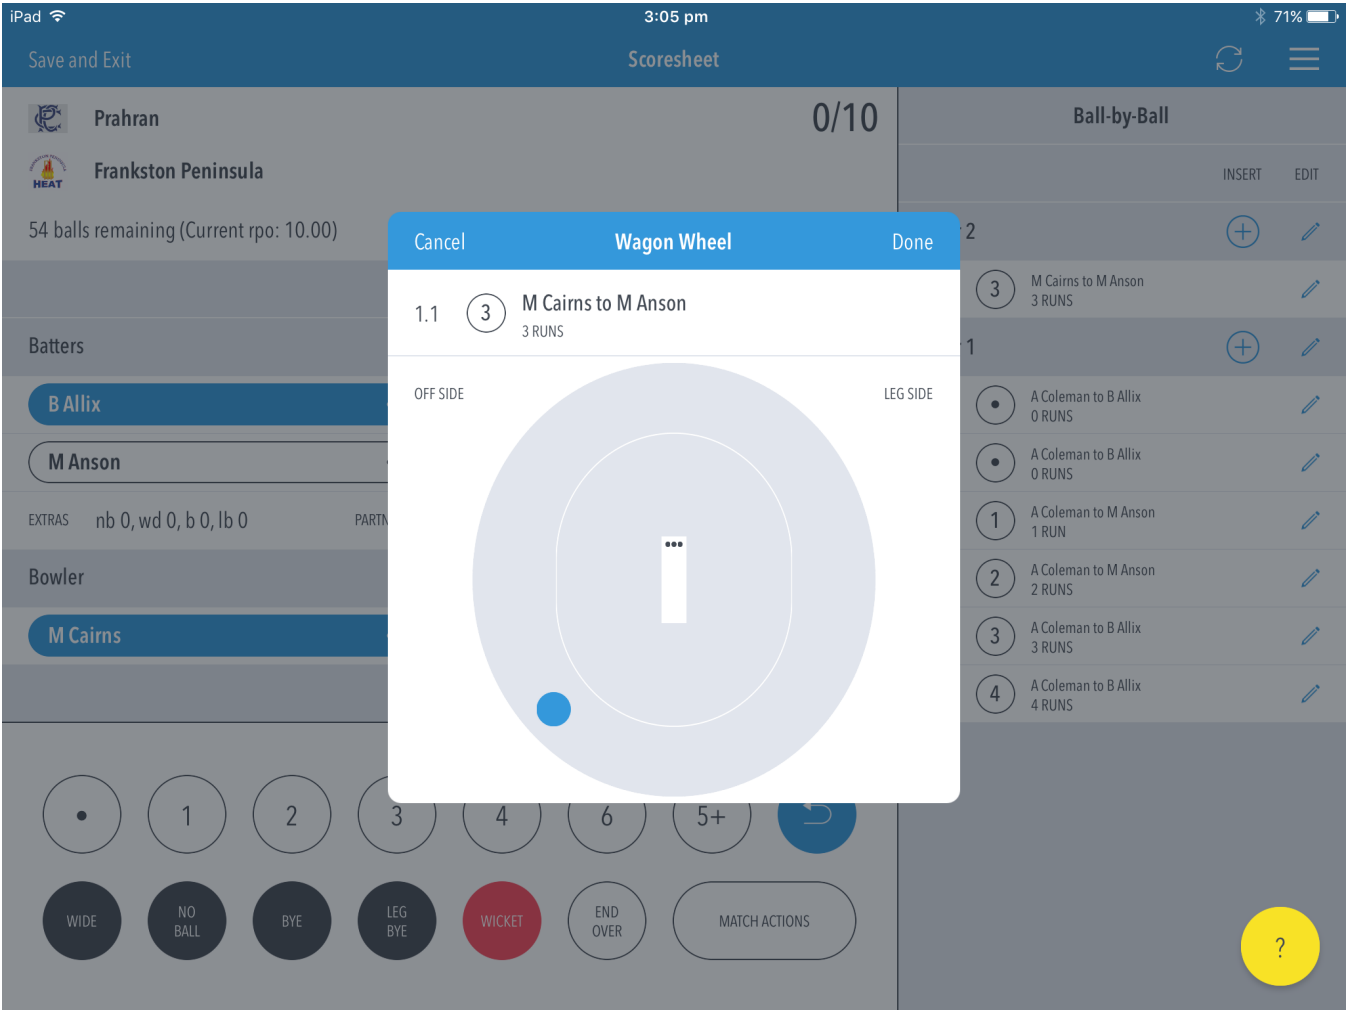

### Plotting

If the 'show wagon wheel' setting is turned on, you will be asked to plot where the ball went after each scoring shot. Simply tap where this is on the oval and hit 'Done'.

If you do not wish to record a shot on the wagon wheel, tap cancel to return to the scoring page to score the next delivery.

**Note**

Users can turn on/off wagon wheels via the 'Match Settings' menu item

### Viewing

Users can view a batters wagon wheel by selecting the graphs button via the three dot icon next to the strike batters or via the edit scorecard page.

The screenshot displays the Cricket Scorebook app interface. At the top, a blue navigation bar contains a 'Save and Exit' button, the 'Scoresheet' title, and a menu icon. Below this, the match header shows the teams 'Prahran' and 'Frankston Peninsula' with their respective logos, a score of '0/10', and a status of '54 balls remaining (Current rpo: 10.00)'. A 'Projected: 100' indicator is also present.

The main content area is divided into two sections. The left section is a table for the '1st Innings' scorecard, listing 'Batters' (B Allix, M Anson) and 'Bowlers' (M Cairns) with their statistics. A context menu is open over the table, offering options: 'Change strike', 'Change batter', 'Graphs' (highlighted with a red border), and 'Cancel'. The right section, titled 'Ball-by-Ball', shows a list of balls bowled, including the number of runs scored and the bowler's name.

At the bottom, a control panel features a row of circular buttons for ball types (dot, 1, 2, 3, 4, 6, 5+) and a blue circular button with a refresh icon. Below this is a row of buttons for cricket actions: 'WIDE', 'NO BALL', 'BYE', 'LEG BYE', 'WICKET' (highlighted in red), 'END OVER', and 'MATCH ACTIONS'. A yellow circular button with a question mark is located in the bottom right corner.

The 'Scoring Zones' groups runs based on sections within the ground.
