Registration Management - State Body

The State Body is responsible for managing the Regional settings that dictate Registration Management for their affiliates.

Specifically, the State Body must configure Derived Registration Periods and Types using the framework set by the National Governing Body. From these Regional Periods and Types, affiliated entities can then derive further periods and types as required. State Bodies can also manage accounts and track payments via Registration Management.

State Users should perform the following tasks:

- Registration Types - State Body
- Registration Period - State Body
- Registration Manager - State Body
- Registration Accounts - State Body
- Receive offline payment - State Body
