

Creating a Home Page

A SportzVault home page is made up of the following items which display in the following order within the standard SportzVault framework:

- Custom html content (the 'top' content) - optional
- News summary - can be enabled or disabled [More information](#)
- Events summary - can be enabled or disabled [More information](#)
- Custom html content (the 'bottom' content) - optional

In this way it is possible for a home page to be completely tailored to your needs.

Example scenarios are:

- Standard home page of news and events summaries only - enable the news and events summaries and leave both html content files empty.
- Completely tailored home page consisting of custom html content - disable news and events summaries, and create html content in the 'top' content file (the bottom file is not required as it would follow on from the top file in this scenario).
- News summary only, and a footer on the home page - enable the news summary, disable the Events summary, and add the footer html content in the 'bottom' content file.

Maintaining html content in the home page files

Use the following HTML links to maintain the HTML:

- [Working with HTML pages](#) (top and bottom content)
- [Working with News and Events](#)
- [Working with Slideshow Gallery](#)
